

# Scope of Services

## What do you do?

You are a trusted member of the healthcare community. When signing-up for a SEC<sup>3</sup>URE membership, we ask for your primary role so facilities can identify what you are doing onsite. This ensures you are assigned the proper requirements and adhere to all appropriate facility bylaws.

## Where do you go?

As a healthcare professional, you have a responsibility for protecting patients. It is important to tell facilities which zone you conduct most of your business when onsite. This, combined with your role, ensures you are fulfilling the right set of facility credential requirements. If you have questions about where you need to visit in a facility or questions about your correct access level, please contact the facility directly to confirm.

## Radiation exposure

Facilities that provide imaging or use radiation-producing materials will require participation in verified Radiation Safety Programs. IntelliCentrics SEC<sup>3</sup>URE Passport closes this critical safety gap by providing seamless quarterly radiation monitoring and safety training.

Need to **change** your Scope of Services? Contact us directly and we can do that for you.
