

SEC³URE Mobile App for HCIR | Release Notes – 4/7/2017

Intelicentrics is proud to officially release our latest version of the SEC³URE Mobile App for HCIRs [1.3.49]. HCIRs will need to update the SEC³URE App on their mobile device (Apple & Android) to see these improvements. This latest release addresses minor bugs for both Apple iOS and Android, expands facility attachments, and now allows HCIRs to register, purchase (*and renew*) subscriptions and additional services from mobile devices.

Features included in this release:

- Register and Purchase Subscriptions directly from the SEC³URE Mobile App
Previously, HCIRs needed to both register and make purchases from either a PC or tablet device using a standard browser. After that, they could download the SEC³URE Mobile App and then perform typical actions. With this update, HCIRs / Reps can now perform almost all SEC³URE actions via their mobile devices eliminating most needs for PC access.
- Add Facilities upon Registration
When a new SEC³URE HCIR registers through the Mobile App, she/he will be able to immediately select facilities so she/he may see if credential requirements are met.
- Print facility badge using Mobile device
This new release addresses the bug where HCIRs / Reps could check-into a facility, however they could not print a badge at the facility.
- Longer appointments now include a 30-minute Mobile SMS Check-out warning.
The Mobile SMS check-out reminder feature now features a 30-minute warning for those appointments that are longer. To enable SMS check-out reminders, log into your SEC³URE account via PC: My Account > Message Preferences

System Requirements for SEC³URE Mobile App:

- Apple iOS 8.0 or later | Compatible with iPhone, iPad, and iPod Touch
- Android 4.0 and up
